

Pediatric Pathology Fellowship

The Departments of Pathology at The Children's Hospital and the School of Medicine, University of Colorado Denver, offer a one to two year, ACGME-accredited fellowship in pediatric pathology. The program comprises pediatric surgical pathology, perinatal pathology, autopsy pathology, blood banking, transfusion medicine, clinical chemistry, hematology, microbiology, virology, flow cytometry, molecular diagnostics and electron microscopy. A combination of research and service activity is encouraged. However, the fellowship year can be tailored to the incumbent's intent to enter academic pathology or private practice. The Children's Hospital is a 270-bed freestanding hospital and is the major site for the University's Department of Pediatrics. Its Department of Pathology processes approximately 5,000 surgical, 500 bone marrow and 3,500 cytology specimens annually. The University Department processes more than 350 perinatal autopsies and placentas, predominantly from high-risk pregnancies. The combined pediatric pathology faculty consists of three anatomic pathologists, one clinical pathologist and three PhDs. The close relationship between the Departments allows the fellow to draw upon expertise and resources in virtually every area of diagnostic and experimental pathology. The Children's Hospital and the University of Colorado Denver, School of Medicine are both located at the Anschutz Medical Campus.

Requirements:

Applicants should have completed training in an approved residency program in AP or AP/CP. Applications for appointment beginning July 1 of the preceding year will be considered until December 1.

Applications:

Send letter of Pediatric Pathology inquiry and CV to: Mark A. Lovell, MD, Program Director, Department of Pathology A036-B120, The Children's Hospital, 13123 East 16th Avenue; Aurora, CO 80045.

...comprehensive and concentrated programs in diagnostic service and research...

Surgical Pathology Fellowship

The Surgical Pathology Fellowship at the University of Colorado Denver is a one-year comprehensive and concentrated program in diagnostic service and in research. The program accepts one applicant into the program each year. The fellow participates in the sign-out of most general surgical pathology cases, including a relatively high proportion of organ transplant biopsies and resection specimens from breast, GI, lung, and gynecologic oncology cases. In this program the fellow plays a "front line" role in the frozen section service. The fellow helps to present cases at a wide range of clinical conferences, including Tumor Board, Liver/GI, Gynecologic Oncology, Brain Tumor, Bone/Soft Tissue, Melanoma, Breast and Endocrine conferences.

The Surgical Pathology Fellow is given two months of protected time, during which he or she concentrates on an academic project that may include translational or basic research. Most of the fellows choose to develop a research project in one of the department's many research laboratories, focusing on the analysis of regulators of cell growth, cell death, molecular markers of neoplasia, or many other interesting projects under the supervision of our diagnostic and basic science faculty.

Requirements:

Applicants should be AP/CP or AP Board eligible or certified; interview required.

Blood Banking/Transfusion Medicine Fellowship

The 12-month fellowship is designed to prepare individuals for a career in blood banking/transfusion medicine at an academic medical center, a community blood center, or a private practice setting where the individual will be responsible for managing a transfusion service or donor center. This fellowship provides primary training at The Children's Hospital and the University of Colorado Hospital, two large referral centers for pediatric and adult medicine. Time may also be spent at other affiliated institutions. Training encompasses all aspects of blood banking and transfusion medicine including donor testing, blood product processing, transfusion consultation, therapeutic and donor apheresis, coagulation, tissue typing, peripheral blood stem cell collection and blood bank management. More than 25,000 blood products are transfused at the primary fellowship institutions (including 15,000 red blood cells and 3,500 platelets). The fellow is encouraged to participate in research projects leading to presentation at national meetings and publication. The fellow will also be responsible for education of residents and medical students. An optional second year for in-depth research and additional studies may be available.

Requirements:

Applicants should be AP/CP or CP board eligible or certified, other specialties may also be considered; interview is required.

Dermatopathology Fellowship

The 12-month fellowship is designed to prepare individuals with a background in pathology or dermatology for a career in dermatopathology. Training covers a broad range of subjects including immunopathology and laboratory management. Emphasis is placed on clinico-pathologic correlation. Formal teaching conferences and daily sign out of cases utilize 14-headed and 18-headed teaching microscopes with high definition display monitors. The fellow has graduated responsibility for signing out cases and for teaching dermatopathology to pathology and dermatology residents. Pathologists receive training in clinical dermatology and dermatologists receive training in general pathology as required for certification. Dermatopathology responsibility and training continues throughout the full 12 months. The fellow is expected to complete a project suitable for presentation at a national meeting and publication in a medical journal. Support is offered in identifying employment opportunities, which will utilize the fellow's dermatopathology experience. Two fellows are appointed each year.

Requirements:

Board certification or eligibility in pathology or dermatology; interview.

Stipends:

Commensurate with level of postgraduate training.
